DEVICE NET ABSOLUTE MULTI-TURN ENCODER, MHK515-DNET RANGE

MHK515-DNET, standard encoder Ø58mm with DeviceNet interface:

- Robust and compact conception
- Blind shaft version Ø 15 mm (reduction ring available)
- Precision ball bearings with sealing flange
- High temperatures performances -40°C ... +85°C
- Code disc made of unbreakable and durable plastic
- Mechanical memorisation of the number of turns by gears
- Resolution: 13 bits=8192 steps/turn (max 16 bits)
- Number of turns: 12 bits=4096 turns (max 14 bits)
- Polarity inversion and short circuit protection
- Highly integrated circuit in SMD-technology

MHK515-DNET (Connection Cap included)

Shaft diameter can be reduced at 12mm, 10mm or 8mm by reduction ring (by slipping them into the hollow shaft)

Status indication with two LED's in the connection cap

Err - Green LED	Sta - Green LED	Meaning		
off	off	No power supply		
off	on	Encoder is ready, Boot Up message not sent (no further device on network, wrong baud rate) or encoder in prepared status		
flashing	on	Boot Up message sent, device configuration is possible		
on on		Normal operation mode, Encoder in Operational Status		

MECHANICAL DATA

	Cover : aluminum		
Material (option stainless steel)	Body : aluminium		
(-1,	Shaft: Stainless steel		
May shaft loading	Axial: 40 N		
Max. shaft loading	Radial: 110 N		
Shaft Inertia	≤ 30 g.cm²		
Torque	≤ 3 N.cm		
Speed (continuous)	6 000 RPM		

Shocks (EN 60068-2-27)	≤ 100 g (half sine, 6 ms)			
Perm. shocks(EN 60028-2-29)	≤ 10 g (half sine, 16ms)			
Vibration (EN 60068-2-6)	≤ 10 g (10Hz 1 000Hz)			
Weight (Aluminium Version)	600 g			
Operating temperature	- 40 + 85°C			
Storage temperature	- 40 + 85°C			
Humidity	98 % without condensation			
Protection (EN 60529)	Cover: IP65, Shaft: IP64

DEVICE NET ABSOLUTE MULTI-TURN ENCODER, MHK515-DNET RANGE

ELECTRICAL DATA

Interface	Transceiver according ISO/DIS 11898			
Transmission rate	Max 500KBauds			
Device addressing	By rotary switches			
Power Supply	10 - 30Vdc			
Current consumption	max. 100mA (24Vdc)			

Power consumption	max 2,5W		
Step frequency LSB	800 kHz		
Accuracy of division	+ ½ LSB		
EMC	EN 61000-6-4 EN 61000-6-2		
Electrical lifetime	> 10 ⁵ h		

TRANSMISSION MODE

Polled Mode	By a telegram the connected host calls for the current process value. The absolute rotary encoder reads the current position value, calculates eventually set-parameters and sends back the obtained process value by the same identifier
Change of State	The absolute rotary encoder transmits the actual process value. The process value is transmitted when the position changes. This is useful to reduce the bus activity
CYCLIC Mode	The absolute rotary encoder transmits the actual process value event controlled by an internal timer. This is also useful to reduce the bus activity

PROGRAMMABLES PARAMETRES

Operating Parameters	As operating parameters the code sequence (complement) can be programmed. This parameter determines the counting direction, in which the output code increases or decreases
Resolution (pos./turn)	The parameter resolution per revolution is used to program the desired number of steps per revolution. Value between 1 and 8 192 can be programmed
Total Resolution "Max-RANGE"	This parameter is used to program the desired number of measuring units over the total measuring range. This value may not exceed the total resolution of the absolute rotary encoder. If the encoder is used in a continuous measuring application, certain rules for the setting of this parameter must be followed. These rules are outlined in the manual
Preset Value	The preset value is the desired position value, which should be reached at a certain physical position of the axis. The position value is set to the desired process value by the parameter pre-set

INSTALLATION

The rotary encoder is connected by three cables. The power supply is achieved with a two-wire connection cable through one PG 9. Each one of the twisted-pair and shielded bus lines are guided in and out through two PG 9 on the right side (as seen on clamps)

CONFIGURATION

The setting of the node number is achieved by 2 turn-switches in the connection cap. Possible addresses lie between 0 and 63 whereby every address can only be used once. 2 LEDs on the backside of the connection cap show the operating status of the encoder

There is a resistor provided in the connection cap, which must be used as a line termination on the last device

ORDERING REFERNCE (Contact the factory for special versions, ex: electronics, special flanges, connections...)

MHK5	D2	B1	В	12	13	В	15	0	0CC
Absolute multi turn encoder	1) E V I (' E	Version	Code : Binary	Number of turns 2 ¹² (4 096)	Resolution (steps/turn): 2 ¹³ (8 192)	Blind Shaft	Shaft diameter (reduction ring available upon request)	Without mechanical options	Connection Cap output

Ordering code: MHK515-DNET-001 = MHK5 - D2 B1 B - 12 13 - B15 0 - OCC
